

Rebel Applied Module 5 Service & Troubleshooting

Course Description

Rebel Applied Module 5: Service & Troubleshooting provides basic information that all students should know as they begin to learn about the Rebel Applied unit. This includes an introduction and walkaround of the unit, along with information about the typical components used on a Rebel Applied unit

Students should have an understanding of the refrigeration cycle, basic electronics, and simple control circuits. The course will use these basic concepts to develop an understanding of the Daikin Rebel Applied products. We recommend that students review **IM-1287** and **OM-1288** prior to the start of class. Visit www.daikinapplied.com and enter **1287** and **1288** in the search field.

MicroTech® 4 Controls (Modules 1 - 5) for Rebel Applied Products is required prior to attending this course.

Rebel Applied Modules 0-4 (online) is required prior to attending this course.

Learning Outcomes

- Perform the appropriate steps to resolve service and troubleshoot operational Rebel Applied issues
